

TABLE OF CONTENTS

1. Introduction
 - a. Purpose
 - b. History of developments in magnetism and magnetic materials
 - c. What is magnetism?
 - d. Types of magnetism: para, dia, ferri, anti-ferri, ferro, anti-ferro
 - e. What is a “permanent” magnet?

2. Fundamental Properties of Magnetic Materials
 - a. Units (SI and CGS)
 - b. Hysteresis (loop)
 - c. Material properties defined (on the loop)
 - d. Normal versus Intrinsic Loops
 - e. Thermal Effects
 - f. Hard (Permanent) versus Soft Magnetism

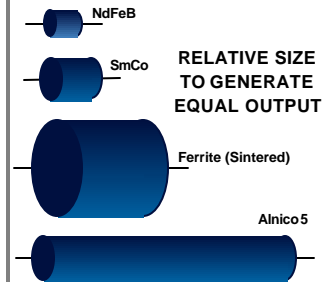

3. Measurement and testing
 - a. Flux density measurements using a Gaussmeter
 - b. Flux coil measurements using a fluxmeter
 - c. Hysteresisgraph
 - d. Pulse magnetometer

4. Permanent Magnet Materials
 - a. Cast alnico
 - b. Sintered alnico
 - c. Samarium cobalt
 - d. Neodymium-iron-boron
 - e. Ceramic (Ferrite)
 - f. Iron-chrome-cobalt
 - g. Bonded
 - h. Samarium-iron-nitride
 - i. Miscellaneous (CuNiFe, MnAlC, Pt-Co, etc)

5. Markets and Applications
 - a. Market Segments: Industrial Equipment, Reprographic, Computers and Peripherals, Security Systems, Advertising and Promotional including Signs and Displays, Toys, Novelties, Telecommunications, Consumer and Appliance, Automotive, Military and Aerospace, Medical, Office Automation, Power Tools
 - b. Devices: Acoustic Transducers, Actuators, Focusing Devices, Gauges, Holding Devices, Motors, Sensors, Torque Coupling Devices, and Biomedical Devices

6. Designing with Permanent Magnets
 - a. Design equations
 - b. Flux density in space calculations
 - c. Permeance calculations
 1. Magnet in space (simple form of permeance equations)
 2. Circuit permeance calculations
 - d. Selecting the “Best” permanent magnet material
 - e. Finite and Boundary Element Analysis
 - f. Design examples

7. Magnetizing and De-magnetizing
 - a. Power supplies
 1. Effects of capacitance vs. voltage

- 2. Parasitic resistance and inductance effects
- b. Fixtures
 - 1. Basic designs
 - 2. Simple calculations for solenoid coils
 - 3. Temperature effects
- c. Pole configurations

- 8. Environmental Considerations
 - a. Coating & plating: Types of coating, Benefits and limitations, Relative cost
 - b. Radiation effects

- 9. Manufacturing Processes
 - a. Foundry casting: Alnico, Iron-chrome-cobalt, Platinum-cobalt Magnets
 - b. Ceramic processing: Ferrite (Ceramic) Magnets
 - c. Powder metallurgy (Press & Sinter): Samarium cobalt, Neodymium-iron-boron, Sintered alnico
 - d. Bonded processes: Calendering, Extrusion, Compression bonding, Injection molding
 - e. Precursor processing: Rapid quenching, Calcio-thermic reduction, Melt/Cast

- 10. Related Magnetic Phenomena
 - a. Hall effect
 - b. Magnetostriction
 - c. Magnetoresistance
 - d. Kerr effect

- Appendices:
 - A. Bibliography
 - B. Glossary

- Index
